Some New obſervations about the Planet Mars, *communicated ſince the Printing of the former ſheets.*

There was very lately produced a Paper, containing ſome obſervations, made by Mr. *Hook*, about the Planet *Mars*; in the *Face* whereof he affirmed to have diſcovered, in the late months of *February* and *March*, that there are ſeveral *Maculæ* or *Spotted parts*, changing their place, and not returning to the ſame Poſition, till the next enſuing night near about the ſame time. Whence it may be collected, that *Mars* (as well as *Jupiter*, and the *Earth*, *&c.*) does move about his own *Axis*. of which a fuller account will be given hereafter, God permitting. This ſhort and haſty intimation of it, is intended onely to invite others, that have opportunity, timely to make Obſervations, (either to confirm, or rectify) before *Mars* gets out of ſight.

Printed with Licence for *John Martyn*, and *James Alleſtry*, Printers to the Royal Society. 1666.
